

EXHIBIT B

VISITOR ACCESS TO THE AER COMPUTER NETWORK

AER-0305S01F15-00

Atmospheric and Environmental Research, Inc. (AER) has agreed to provide you direct access to AER's computer internal network inside the company's firewall. While AER takes reasonable care to impose normal security constraints on appropriate parts of its internal computer network, the level of such security is less stringent to internal users than those outside the firewall. Consequently, there is a possibility that you may become aware of data, documents and other information which is confidential and proprietary to AER.

AER has developed, and is the owner of, numerous devices and techniques constituting confidential information, trade secrets, and proprietary information relating to a wide variety of its pursuits involving research, products, methods, sources, pricing and bidding techniques, customer lists, marketing approaches and the like. AER has also been entrusted with proprietary and/or classified information from other companies, institutions and government entities. These matters may be contained in a number of forms on our computer network in both secure and unsecured areas.

In return for access to our internal computer network we ask you to agree to the following paragraph:

The network visitor agrees not to disclose to others, or allow others to use any such confidential information, trade secrets, passwords or proprietary information and will not accept, copy, or remove from the Atmospheric and Environmental Research, Inc. computer network any documentation, data compilations, drawings, models, prototypes, or any other data except as identified in Appendix A, and authorized by a Vice President of Atmospheric and Environmental Research, Inc.
